This woman tells me she did Mark's research on the medical aspects. She has asked me for help and I'll do what I can. I think she may have something, or at least that what she has will bear looking into. I will keep you posted. He name did not come outm in the Thermofaxing. It is Ruth Fortel. She is right about the stretchers not being located, or the mens' room, but the elevator is marked in but not captioned (21H157). Bearing on this is a very rough sketch, 21H673, if it interests you. When I see her medical drawings I shall check them with doctors, as probably you can do better if it interests you.

Harold
